

III. Inventories [ORC Section 3734-53(A)(1)-(4)]

The Tables referenced throughout Section III of this *Plan Update* are included as attachments at the end of the section.

SWACO has prepared the inventory section of this *Plan Update* to provide a review of the solid waste management infrastructure in 2008. This inventory of solid waste facilities and activities is based on the 2008 reference year. The reference year serves as the basis for future projections in later sections of this *Plan Update*. The solid waste inventory also presents a picture of the movement of solid waste through collection, transfer, disposal, reduction and recycling within and outside SWACO.

The data and information presented in the inventory section can be found in multiple locations including the Annual District Report, Transfer and Landfill Facility Annual Operational Reports for 2008, SWACO's Re-TRAC Data Management System (broker and industrial surveys), SWACO internal operating reports (includes hauler information, waived solid waste reports), political subdivision information on trash collection, Ohio EPA Annual Compost Reports and Franklin County Health Department reports.

A. The Reference Year

The reference year for this *Plan Update* is 2008.

B. Existing Solid Waste Landfills

Landfills continue to be the dominant method of disposing of solid waste in Ohio and the United States. The Franklin County Sanitary Landfill is located near Interstate-71 in southern Franklin County is a valuable public asset. The ability to manage solid waste for our residents, businesses and industries is important from several perspectives including:

- Public Health
- Safety
- Economic
- Environmental

On January 1, 2009, the Franklin County Sanitary Landfill had approximately 29 years of projected landfill capacity available using 2008 waste receipt disposal totals. SWACO must balance their mission to operate the landfill, other infrastructure and required solid waste management programs to comply with Ohio's laws, goals and regulations while protecting and preserving landfill capacity. Many of the programs currently operated by SWACO and presented in this *Plan Update* are focused on the long-term protection and preservation of

landfill capacity while at the same time it is also SWACO's mission to ensure that there is adequate funding to operate the solid waste infrastructure to protect the health, safety and environment of SWACO's residents and businesses.

In 2008, solid and exempt waste (construction and demolition debris, fly ash and foundry sand) generated in the District was disposed in twelve landfills (Table III-1). The twelve landfills managed approximately 1.2 million tons with nearly 68.5 percent (845,992 tons) managed at the SWACO Landfill. The source for landfill data comes from the Annual Operational Reports for Landfills in 2008 and from the Ohio Solid Waste Facility Data Report for 2008.

Figure III-1 Transfer and Landfill Facilities Receiving SWACO Solid Waste in 2008

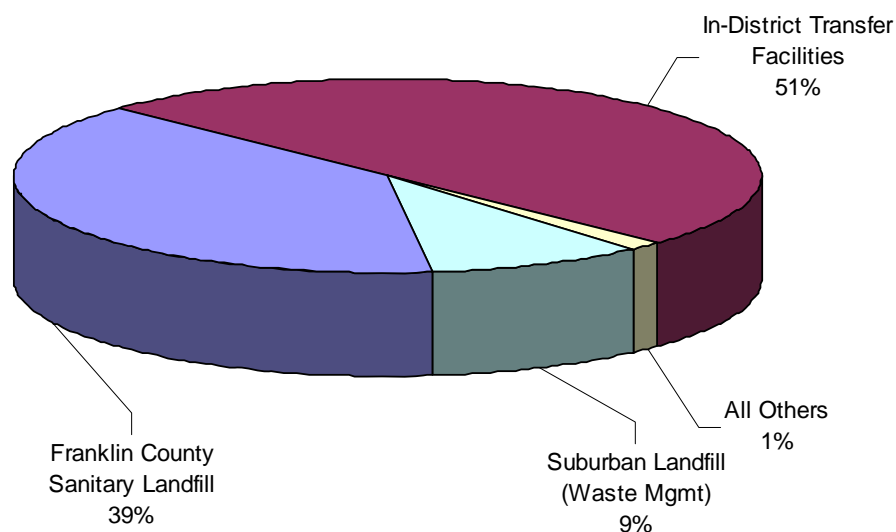

Figure III-1 provides a percentage breakdown of the solid waste facilities managing Franklin County generated solid waste. Approximately 50% of the solid and exempt waste collected for landfill disposal first arrives at a transfer station located within Franklin County.

- Canal Winchester (Waste Management)
- Reynolds Avenue (Republic)
- Rumpke Columbus Transfer (Rumpke Waste)
- SWACO (Georgesville Road)
- SWACO (Jackson Pike)
- SWACO (Morse Road)

The transfer facility manages the solid waste and prepares for transport to one of the landfills presented in Table III-1. There is also

approximately 50% of Franklin County solid waste that is transported directly (direct hauled) to a landfill. The Franklin County Sanitary Landfill received 39% of the total waste landfilled in 2008 via direct haul. The Waste Management Suburban Landfill in Perry County received nine percent of the total waste landfilled via direct haul. Less than one percent of the total solid waste landfilled that is direct hauled was managed by out-of-district transfer facilities and other landfills.

Figure III-2 – Out-of-District Transfer and Landfill Facilities Receiving Direct Hauled SWACO Solid Waste in 2008

Figure III-2 depicts the Transfer and Landfill facilities that are categorized in Table III-1 as out-of-district facilities.

Figure III-3 - 2008 Waste Tonnage Landfilled by Sector in 2008

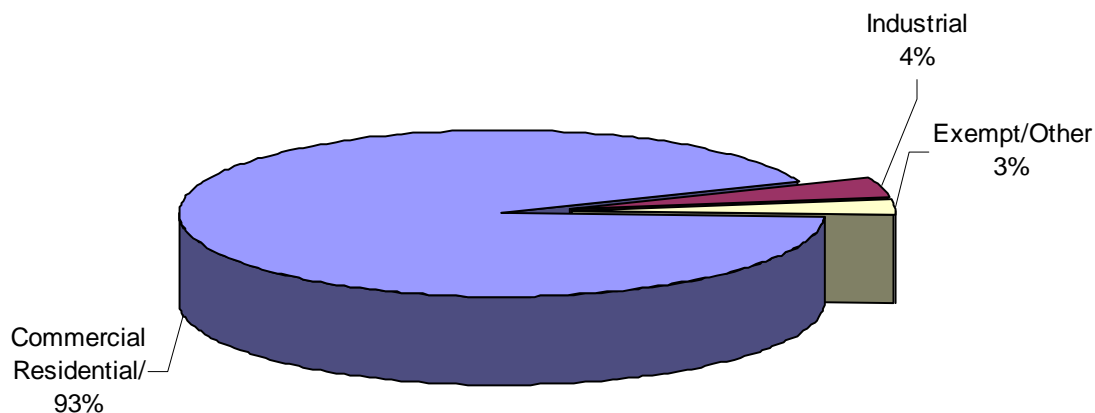

Figure III-3 presents the three major sectors of waste generators and their percentages of solid waste landfilled in 2008. The majority of the solid waste landfilled within SWACO is waste from the Residential/Commercial Sector. In 2008, Residential/Commercial Sector waste accounted for 93 percent of the solid and exempt waste landfilled. Approximately four percent of the solid waste disposed in landfills is from the Industrial Sector. Exempt waste that is landfilled at solid waste facilities accounts for only three percent of the solid waste transported to solid waste landfills. Most construction and demolition debris waste is disposed in facilities that are dedicated to managing the construction and demolition debris waste stream. This is one reason, along with cost for disposal, why there is only a small quantity of construction and demolition debris that is landfilled at solid waste landfills. Currently, construction and demolition debris landfills environmental regulatory requirements are less extensive than a municipal solid waste landfill. Construction and demolition debris facility licenses, permits and inspections are processed by either the local health district or Ohio EPA. SWACO has no regulatory jurisdiction in regard to construction and demolition debris landfill operations.

C. Existing Incinerators and Resource Recovery Facilities

The trash burning power plant facility closed in 1994. SWACO does not operate any incineration or resource recovery facilities (Table III-2).

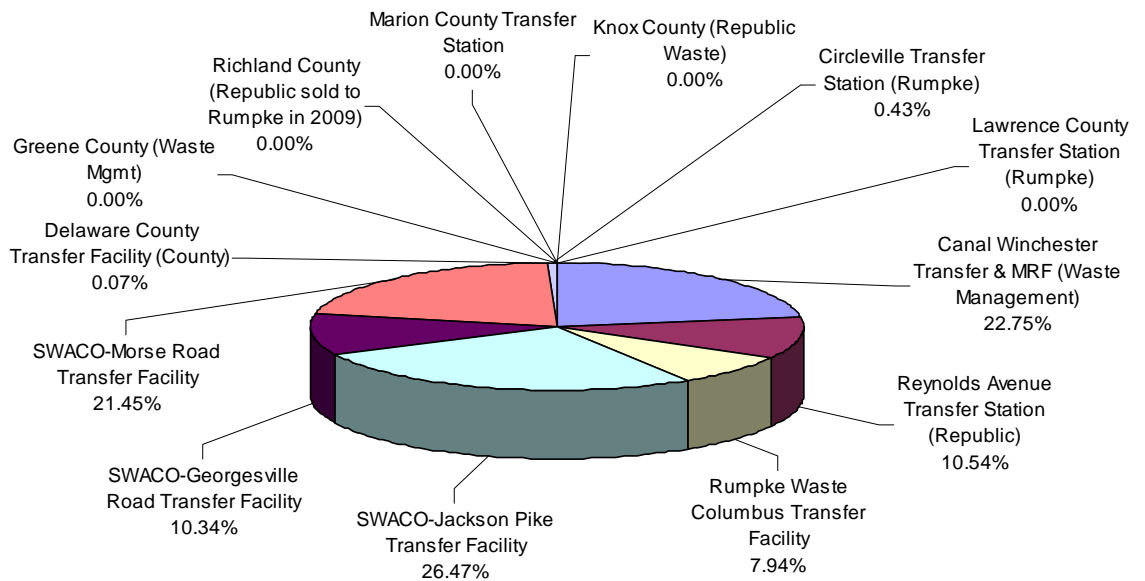

D. Existing Transfer Facilities

SWACO generated solid waste is serviced by six in-district transfer facilities and seven out-of-district transfer facilities. Transfer facilities are important infrastructure facilities for solid waste collection and disposal systems. Transfer facilities allow smaller rear packer

(residential collection trucks) and front-end loader trucks (commercial/industrial waste collection trucks) to reduce the amount of time it takes to deliver waste to the landfill. Having transfer capabilities also reduces wear and tear on the packer trucks. The smaller trucks deliver the waste to the transfer facility. Transfer facility equipment then move the waste to larger trailer trucks for the trip to the landfill. Transfer facilities also provide opportunities for separation of recyclable materials (aluminum, metals, paper, plastic, glass and other materials) and to transport the materials to processors and end users. Processors are companies that take a material and prepare it to be used as a raw material. The material could be used to make the same product like glass to glass bottles or aluminum cans to aluminum cans or a different product like plastic milk jugs or soft drink containers can be used as a raw material for plastic picnic tables, plastic car bumpers, carpeting or clothes. An end user is a manufacturer of a product that will take a recyclable material (recycled paper) that is collected and use it directly as a raw material in their (paper) manufacturing process.

In 2008, SWACO generated solid waste was delivered to thirteen transfer facilities (Table III-3). The source for transfer facility data comes from the Annual Operational Reports for Transfer Stations in 2008 and from the Ohio Solid Waste Facility Data Report for 2008. Transfer facilities, like landfills, categorize the type of solid waste received. Approximately 584,000 tons of Residential/Commercial Sector waste and approximately 36,800 tons of exempt waste was received and transferred at the thirteen facilities. Figure III-4 presents the thirteen transfer facilities managing SWACO generated waste prior to shipping to a landfill.

Figure III-4 - Transfer Stations Used by the District in 2008

Note: Transfer stations with 0 percent had less than 1 percent delivered to their facility from SWACO.

SWACO operates three of the transfer facilities. They include:

- Georgesville Road – 64,201 tons;
- Jackson Pike – 164,326 tons; and
- Morse Road – 133,156 tons.

Three private sector haulers operate transfer facilities within SWACO. They include:

- Canal Winchester – 141,232 (Waste Management);
- Reynolds Avenue – 65,417 (Republic); and
- Rumpke Columbus Transfer – 49,276 (Rumpke Waste).

Figure III-5 – 2008 Operating Transfer and Landfill Facilities

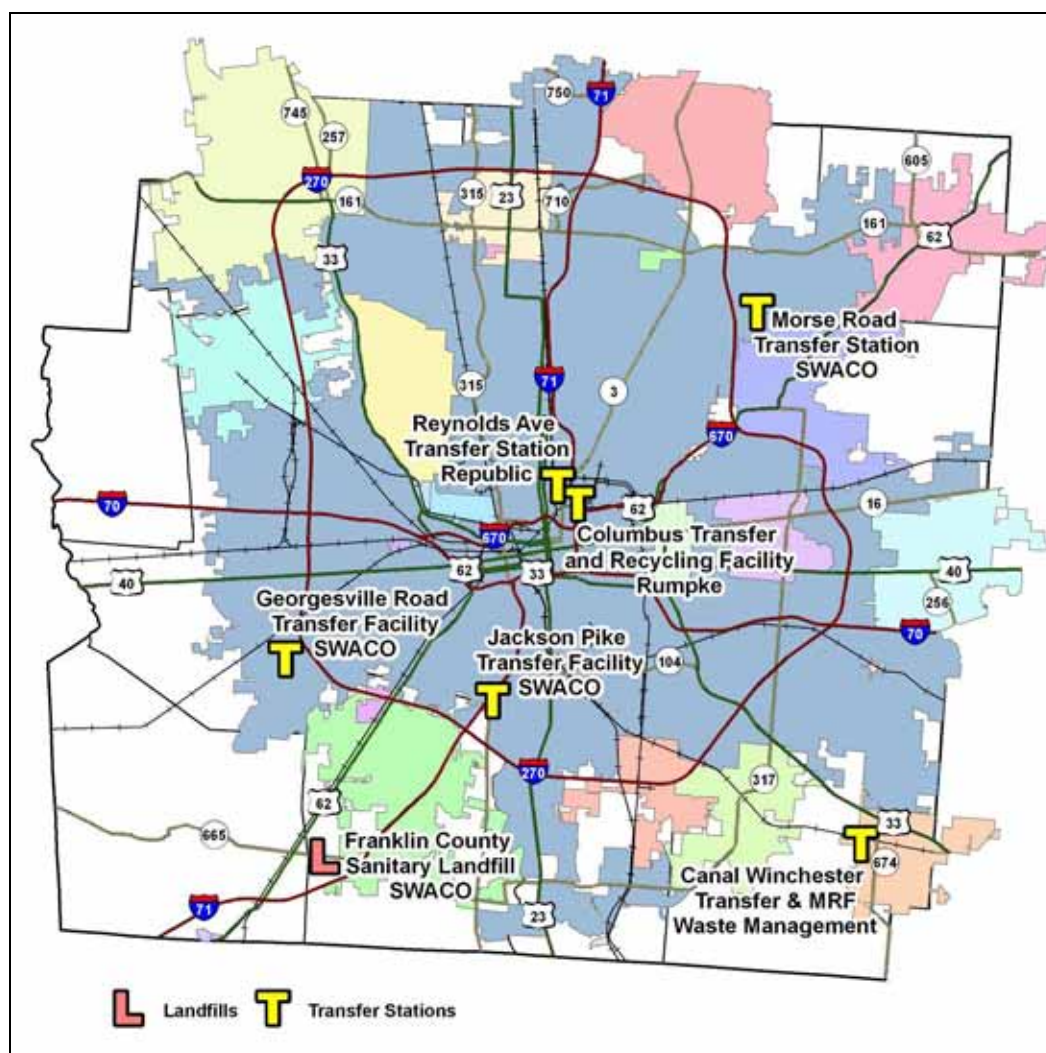

Figure III-5 displays the locations of the six in-district transfer facilities and the Franklin County landfill. Over 3,100 tons of solid waste is managed by seven transfer facilities located outside of Franklin County. Figure III-6 depicts the flow of direct hauled waste from SWACO solid waste generators to the transfer facilities and landfills located both inside and outside Franklin County. The three SWACO Transfer Facilities (Georgesville Road, Jackson Pike and Morse Road) transfer waste to the SWACO Landfill. There are three transfer facilities within SWACO that are operated by private solid waste companies. These three in-district facilities, the seven out of district transfer facilities and eleven out-of-district landfills operating in 2008 were required to deliver their waste to the SWACO Landfill unless they received a waiver to transfer waste directly to landfills they own in other counties or receive a waiver to landfill direct hauled waste. Facilities operating in 2008 were eligible to apply for a waiver and were required to pay a \$7.00 waiver fee per ton to SWACO for the right to transfer the waste to other operating landfill facilities outside SWACO's jurisdiction.

recycling programs reported they collected approximately 30,000 tons of recyclable materials. Each of these programs collected aluminum, steel, glass, and plastic containers. Each community also collected newspaper, cardboard, magazines, mixed paper and office paper.

In 2008, the City of Columbus and Clinton Township offered the only subscription curbside programs within the District (Table III-4). A subscription curbside program is a recycling service that a resident requests and pays for with a subscription fee. All residents are not required to pay a fee in a subscription program. Residents who chose not to pay the subscription fee do not have curbside recycling. The City of Columbus reported that the subscription program collected nearly 20,000 tons of recyclable materials in 2008. The City of Columbus and Clinton Township subscription programs collect the same materials as the non-subscription programs. Figure III-7 below depicts curbside recycling programs by type in Franklin County.

Annual District Report (ADR) for 2008. Additional information regarding the status of existing drop-offs was provided during the preparation of this *Plan Update* and after the submission of the ADR. The number of drop-offs is adjusted to accurately reflect the correct locations and correct number of drop-offs operated by SWACO in 2008. Figure III-8 depicts the locations of the drop-offs.

Figure III-8 – SWACO Drop-off Recycling Program

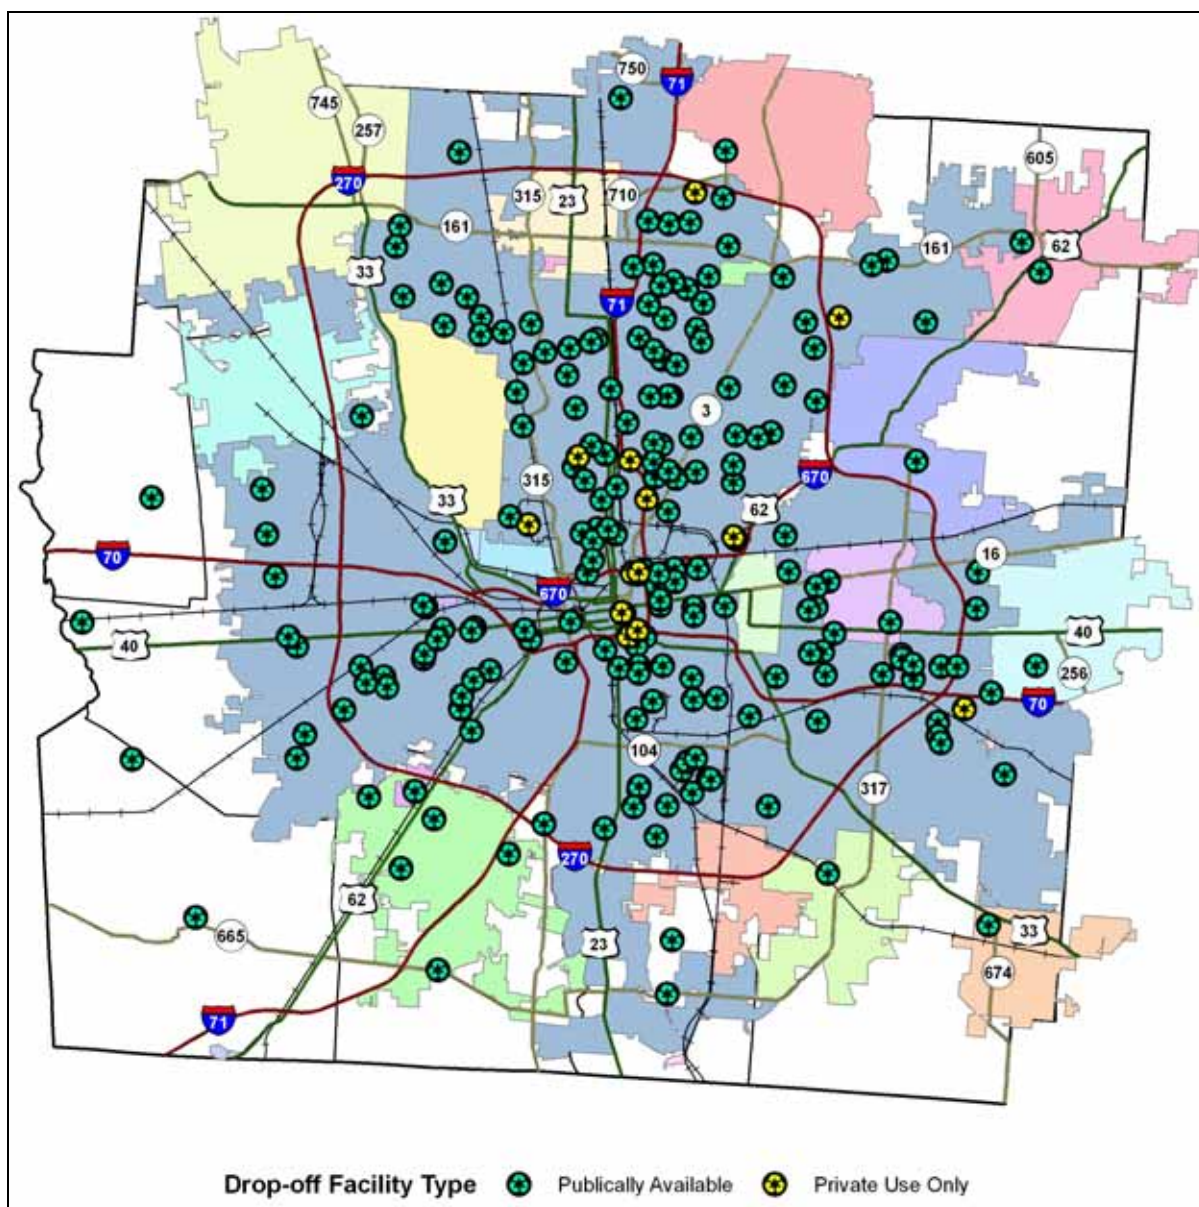

Table III-5 also lists many businesses that are brokers or process recyclables. There are several scrap yards that manage large quantities of metals, along with battery recyclers and paper recycling companies. There are also major waste management companies that process recyclables. Commercial companies that have recycling programs are also listed in Table III-5.

Household hazardous waste (HHW) typically makes up less than one percent of the solid waste stream, but these materials can be the most harmful to the environment and solid waste collection employees. The U.S. Congress has passed the Resource Recovery and Conservation Act (RCRA), which makes it illegal for businesses to dispose of these types of materials in a solid waste landfill. The RCRA law, however, exempts residential homeowners.

Ohio's Solid Waste law, House Bill 592, required solid waste districts to establish a household hazardous waste program. Many districts determined it was in their best interests to establish collection programs to properly manage HHW prior to disposal in a solid waste landfill. Many of the programs established by solid waste districts have recycled many tons of paints and chemical solvents that were previously destined for landfill disposal.

SWACO has an extensive household hazardous waste collection program. In 2008, SWACO conducted 13 one-day mobile collections. The program collected 418 tons of pesticides, herbicides, paints, batteries, gasoline, motor oil, propane cylinders, pool chemicals and chemical solvents (Table III-5). In addition to the weekend community collections, SWACO has contracted for the operation of a permanent HHW facility. This facility was open 104 days in 2008 and it processed 223 tons.

F. Existing Composting/Yard Waste Management Facilities

Yard waste including leaves, grass clippings and brush make up approximately 12 percent of the total waste of the Residential/Commercial Sector generated within SWACO. This is a significant percentage of the waste stream. Yard waste material can be separately managed from the solid waste stream. Yard waste that is composted can be reused as a soil enhancement.

There are several different technologies that can be employed to manage yard waste. The most common and lowest cost is placing leaves, grass clippings and brush in windrows (long elongated piles). Periodically, the piles are turned and over time the heat, addition of water and other biological activity breaks the material down into compost. The material can be used as a soil enhancement for landscapers, residents, highway projects and other uses.

There are eight registered Class IV yard waste compost facilities as described on Ohio EPA's annual report spreadsheet and one Class II within Franklin County (Table III-6). Ohio EPA's facility list as of July 1, 2009 lists Kurtz Brothers' Groveport facility as a Class II and does not include the Columbus Academy Class II project which was a one-time pilot project. These nine facilities composted 119,553 tons in 2008.

SWACO contracts with two facilities to ensure yard wastes are diverted from landfill disposal and managed in accordance with Ohio composting requirements. These two facilities are operated by Kurtz Brothers and Ohio Mulch. Kurtz Brothers reported to SWACO an additional 58,044 tons of material that was categorized as wood waste and converted to mulch. In 2008, a strong wind storm contributed significantly to the amount of wood waste that was managed. This wood material was not required to be reported to the Ohio EPA and not included on the Annual Compost Report. The total yard waste managed within SWACO was 177,596 tons. This included tons managed by registered compost facilities (119,553) and the wood quantities (58,044). Figure III-8 shows the locations of these nine registered compost facilities and the Kurtz Brothers' unregistered facility.

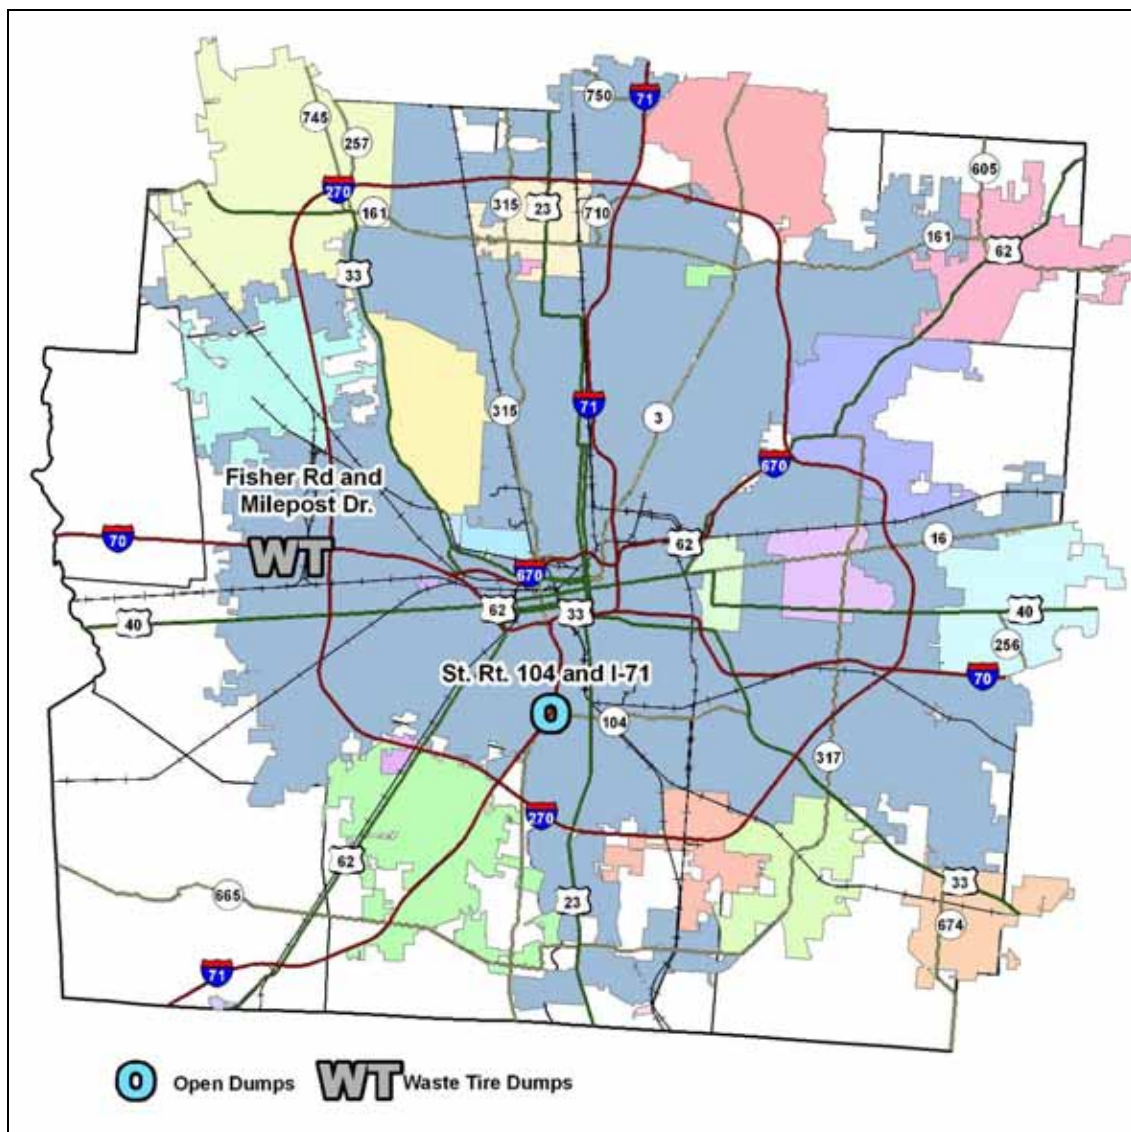

G. Existing Open Dumps and Waste Tire Dumps

Since the last *Plan Update*, there have been sixteen new sites added to the open dump/waste tire dump inventory by the Franklin County Health Department. These sixteen sites are in addition to the three targeted open dump sites presented in the last *SWACO Plan Update* (Table III-8).

Only two open dump sites remain in an ongoing status and are presented in Figure III-9. All of the other sites listed are considered abated. The two sites that are ongoing include:

- One acre site at the intersection of S.R. 104 and I-71.
- A waste tire dump at Fisher Road and Milepost Drive. There are 46 property parcels at this location.

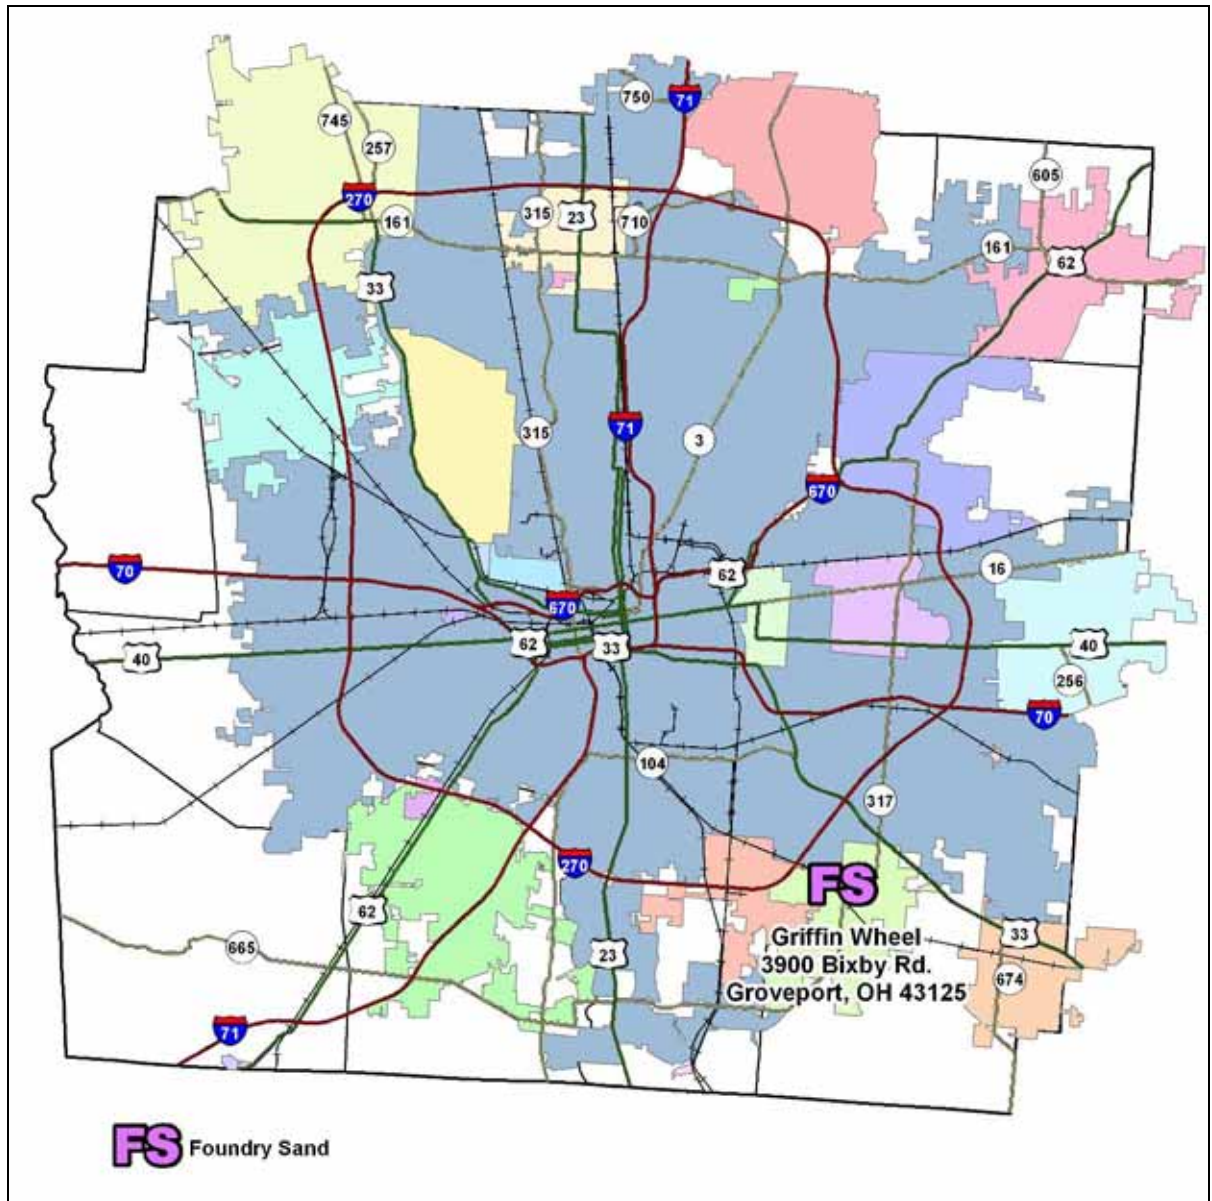

Figure III-9 – SWACO Open Dumps and Waste Tire Dumps in SWACO 2008

H. Ash, Foundry Sand and Slag Disposal Sites

Ohio EPA verified that the Griffin Wheel Company in Groveport continues to be the only foundry sand and slag site located in Franklin County. This site has been in operation for twenty-three years. Figure III-10 identifies the location of Griffin Wheel.

Figure III-10 – Foundry Sand Disposal Site in SWACO 2008

I. Map of Facilities and Sites

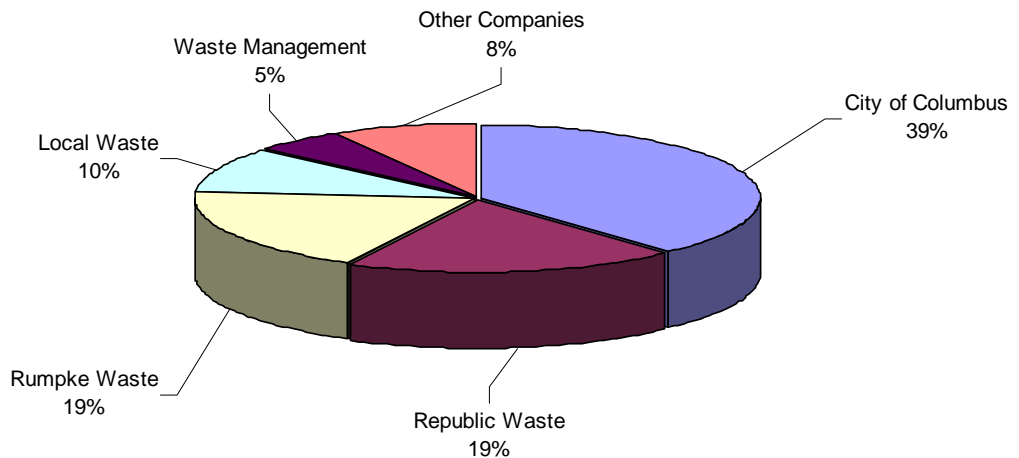

A map of facilities is included in Appendix E.

J. Existing Collection Systems – Haulers

Ten waste haulers account for approximately 95 percent of the material delivered to the SWACO Landfill. One hundred and twenty companies delivered the remaining five percent of the waste to the SWACO Landfill. Solid waste haulers are required to be registered with the Health Commissioner of the Franklin County Health District according to section 803.01 of the Franklin County Board of Health Regulation 800 Comprehensive Solid Waste Regulations. Table III-10 provides a detailed list of haulers delivering waste to the SWACO landfill. In 2008, there were 97 private sector customers (does not include small deliveries by residential customers that paid cash) that delivered waste materials to the SWACO landfill. There were 33 public sector customers that delivered waste materials to the SWACO landfill.

The largest public sector hauler was the City of Columbus. The City of Columbus delivered approximately 325,000 tons or about 40 percent of the waste delivered to the SWACO Landfill in 2008. The four largest private sector haulers operating within SWACO are Local Waste, Republic Waste, Rumpke Waste and Waste Management. These four companies delivered approximately 53 percent of the total waste delivered to the SWACO Landfill. Figure III-11 presents the five largest haulers, as well as the other hauling companies, and the proportion of waste delivered to the SWACO landfill.

Figure III-11 - Solid Waste Haulers Delivering Waste to SWACO Landfill in 2008

K. SWACO Infrastructure

SWACO’s infrastructure is anchored by the Franklin County Sanitary Landfill. This facility is owned and operated by SWACO. The landfill is operating under a permit-to-install that was issued by Ohio EPA to SWACO on May 9, 1997. The permit allows for a 363 acre landfill footprint. The landfill is allowed to receive up to 6,000 tons per day.

Other key pieces of infrastructure for SWACO are the three transfer facilities at Georgesville Road, Jackson Pike and Morse Road. These facilities allow the City of Columbus and other haulers the ability to deliver solid waste to the transfer facility without having to take the waste directly to the landfill. This reduces wear and tear on the hauling trucks and saves on fuel costs.

As described in Section I, SWACO developed a Strategic Planning document in 2008 and 2009 that identifies short term and long term goals for the Authority. The Strategic Plan serves as a guide to SWACO management and associates as well as a document for the Board of Trustees to use to evaluate overall progress of the organization. A significant portion of the Strategic Plan is dedicated to the solid waste infrastructure needs of SWACO. Specifically, this includes the following Operations Department 2009 goals.

Operations Department Goal #1-0907 – Prepare an operational plan for the transfer and disposal of municipal solid waste related to changes in the quantity and characteristics of the MSW stream. Changes in the MSW stream quantity and characteristics may be due to the following:

- new reduction/recycling efforts;
- the current state of the economy; and
- the expiration of waiver agreements with waste haulers at the end of 2009.

Strategies for this goal include a plan for the operation and infrastructure modifications needed to most cost effectively transfer and dispose of incremental volumes of MSW and the disposal of non-MSW. Monitor recycling and partnership activities to predict MSW deliveries to SWACO facilities. Develop best available operating practices for handling and managing the disposal of special wastes.

Operations Department Goal #2-0907 – Expand the Landfill Management Inspection Program (LMIP) to support and manage the Gas Collection & Control System. Strategies for this goal include the evaluation of modifications to the LMIP to incorporate operational data, hire consulting assistance to modify the LMIP, and phase in the implementation of the program.

Operations Department Goal #3-0907 – Develop a long-term plan to reduce SWACO's carbon footprint. Strategies include updating a SWACO carbon footprint inventory, create a carbon footprint management plan, and establish a long-term Emission Reduction Plan.

Operations Department Goal #4-0907 – Complete a cost-benefit analysis of real-time GPS capabilities on the Franklin County Sanitary

Landfill operations. Strategies include visiting and interviewing equipment users, complete internet and literature searches.

Operations Goal #5-0907 – Complete a cost benefit analysis of stationing the SWACO fleet at London-Groveport Road. Strategies and evaluation of efficiencies gained by relocation, determine space requirements and cost, determine if relocation would have unintended consequences, perform a cost benefit analysis, and investigate alternative sources of funding.

In addition to the landfill and transfer stations, the Strategic Plan discusses infrastructure issues that will impact this *Plan Update*. They include:

SWACO 09-04 – Effective Recycling System for Columbus and Neighboring Communities – Goal 1: - Determine whether there is a cost effective way to enhance the City of Columbus current residential recycling program.

SWACO 09-04 – Effective Recycling System for Columbus and Neighboring Communities – Goal 2 - Maximize City of Columbus and SWACO Drop-box recycling system.

SWACO 09-04 – Effective Recycling System for Columbus and Neighboring Communities – Goal 3: - Utilize the consortium of eight communities to promote and encourage further development of consortiums within the Authority's jurisdiction.

One other major portion of the Strategic Plan relates to Flow Control. The Strategic Plan includes the following flow control goal:

SWACO Goal 09-03 – Flow control the amount of waste needed to meet financial obligations. This includes two objectives to address waiver agreements with private waste haulers and begin negotiations with the private waste haulers. It is likely this issue will be resolved prior to the ratification and approval of the *Plan Update*.

It should be recognized that the Strategic Plan will be updated on an annual basis. A complete Strategic Plan is included on disk as Appendix G.
